HAMID SHEHZAD

Backend Developer (Node.js) | MERN Stack Developer | AI Enthusiast

Lahore, Pakistan | hamidshehzad815@gmail.com | 03127846622 | /hamidshehzad | /hamidshehzad815

PROFILE

Computer Science graduate (BSCS) specializing in backend development with Node.js and the MERN stack. Experienced building production-style REST APIs, real-time systems, and authentication layers across freelance client work and large-scale personal projects, with additional experience designing system architecture and training NLP/AI models for full-stack applications.

PROJECTS

LostFoundComplete — Full-Stack Developer

2025 – 2026

Node.js, Express, MongoDB, Next.js, React, Redis, Socket.io | Live: lost-found-complete.vercel.app

- Built a full-stack lost-and-found platform — Node.js/Express + MongoDB (Mongoose) backend with a Next.js/React frontend, using a layered routes → controllers → services → models architecture
- Implemented JWT authentication with Google OAuth (Passport), email verification, and Redis-backed rate limiting across auth, upload, and general API routes
- Designed geospatial search (MongoDB 2dsphere indexing, proximity queries) and full-text search across item listings, plus real-time messaging via Socket.io with typing indicators, read receipts, and Redis-tracked presence
- Built a claims/dispute workflow, a weighted user trust-score system, Cloudflare R2 file storage with local-disk fallback, and a per-user analytics dashboard

EVA (Final Year Project) — Backend Developer

2025 – Present

Node.js, Express, Python, FastAPI, MongoDB, Redis, Flutter, React, DistilBERT | Live: eva-byci.onrender.com

- Designed the system architecture and end-to-end conversational flow across four services (Flutter, React, Node.js backend, Python/FastAPI AI server), then built the Node.js/Express backend (61 REST endpoints) connecting them
- Trained four independently fine-tuned DistilBERT models (~79K labeled training examples) for intent classification and entity extraction, orchestrated through a Redis-backed multi-turn conversation state machine
- Implemented JWT refresh-token rotation, an idempotent cron-based reminder system, and signed-JWT email links for no-login collaboration workflows
- Covered the backend with 250+ Jest test cases

FREELANCE EXPERIENCE — UPWORK

Automate The Trades — Full-Stack Developer (Freelance)

React, Python, AWS Lambda, PostgreSQL, REST APIs, Vitest | Live: automatethetrades.co.nz

- AI-powered job management platform for NZ trade businesses — quoting, scheduling, invoicing, and an AI assistant ("Mate")
- Built and shipped production features across the React frontend and Python/AWS Lambda backend: invoice inbox bulk actions, reminder date validation, analytics job search, mobile AI chat UX fixes, and contractor notification controls
- Worked ticket-by-ticket with PRs, tests, and merge-conflict resolution in a live production SaaS codebase

SKILLS

- **Languages:** JavaScript, Python, C++
- **Backend & APIs:** Node.js, Express.js, RESTful APIs, JWT/OAuth, Socket.io, Layered Architecture
- **Databases & Caching:** MongoDB, MySQL, PostgreSQL, Redis
- **Frontend:** React.js, Next.js
- **Cloud & DevOps:** AWS Lambda, AWS S3, Cloudflare R2, Git/GitHub, Vercel, Render
- **Testing:** Jest, Supertest, Vitest
- **AI/NLP:** FastAPI, spaCy, BERT/DistilBERT fine-tuning
- **Tools:** Postman, Notion, Visual Studio Code, Git

EDUCATION

BS Computer Science, University of Management and Technology, Lahore — CGPA 3.72 — Nov 2022 – Jul 2026

FSc Pre-Engineering, Punjab College, Lahore — Oct 2020 – Sep 2022
