HAMID SHEHZAD

Software Engineer | Backend & Full-Stack | AI Enthusiast

Lahore, Pakistan | hamidshehzad815@gmail.com | 03127846622 | /hamidshehzad | /hamidshehzad815

PROFILE

BSCS graduate with hands on experience building backend systems, APIs and AI-Powered applications in Python and Node.js. Shipped production features on a live SaaS (React, Python/AWS Lambda), built and deployed fine tuned NLP models inside a multi service architecture.

EXPERIENCE

Full-Stack Developer, ***Ignite*** (Feb 2026 - Apr 2026)

- Designed and built REST APIs with Node.js/Express and MongoDB/Mongoose, with JWT authentication and schema modeling for a research-based startup product.
- Optimized MongoDB aggregation queries to speed up data-heavy endpoints, and used async data fetching to make the frontend more responsive.
- Built React UIs from modular components, custom hooks and Redux/Context state, and wired them to the APIs for a secure end-to-end data flow.

Full-Stack Developer, ***Automate the Traders*** **(**Jun 2026 - Aug 2026)

- AI-powered job management platform for NZ trade businesses: quoting, scheduling, invoicing, and an AI assistant (“Mate”)
- Worked ticket by ticket with PRs, test, and merge conflict resolution in a live production SaaS codebase
- Built and shipped production features across the React frontend and Python/AWS Lambda backend: invoice inbox bulk
- actions, reminder date validation, analytics job search, mobile AI chat UX fixes, and contractor notification controls

PROJECTS

EVA (Final Year Project) (Aug 2025 - Jul 2026)

Node.js, Express, NLP, Fast API, MongoDB, Redis, Flutter, React, Distil BERT, LLM | Live: eva-byci.onrender.com

- Engineered a 4-tier microservices architecture across Flutter, React, Node.js, and Python/Fast API to deliver an end-to-end conversational AI system.
- Trained & deployed 4 fine-tuned Distil BERT models on 79K+ labeled examples for intent and entity extraction, orchestrated via a Redis-backed state machine for multi-turn dialogue.
- Built production-grade security & automation featuring JWT refresh-token rotation, signed-token email collaboration links, and an idempotent cron engine for reliable scheduled background jobs.
- Ensured high system reliability by authoring 250+ Jest unit/integration test cases, achieving comprehensive backend code coverage.

LostFoundComplete (Jan 2024 - Jun 2025)

Node.js, Express, MongoDB, Next.js, React, Redis, Socket.io | Live: lost-found-complete.vercel.app

- Architected a full-stack platform using Node.js, Next.js, and MongoDB with a layered routes-controllers-services-models pattern for high maintainability.
- Engineered secure authentication & rate limiting via Google OAuth, JWTs, email verification, and Redis middleware to defend against DDoS attacks.
- Implemented low-latency search and real-time features using MongoDB 2dsphere indexing for geospatial/text search, and Socket.io backed by Redis presence for instant messaging.

SKILLS

- **Languages:** JavaScript, Python, C++, SQL, TypeScript
- **Backend & APIs:** Node.js, Express.js, RESTful APIs, Fast API, JWT/OAuth authentication, Socket.io, Swagger
- **AI/NLP:** Distil BERT fine-tuning, NLP (spaCy), LLM integration, Pandas, NumPy, Matplotlib
- **Databases & Caching:** MongoDB, MySQL, PostgreSQL, Redis
- **Cloud & DevOps:** AWS Lambda, Cloudflare R2, Vercel, Render, Docker
- **Frontend:** React.js, Next.js, Tailwind CSS, Redux
- **Testing & Tools:** Postman, Jest, Notion, Visual Studio Code, Git/GitHub

EDUCATION

University of Management and Technology, Lahore, 2022-2026

BS Computer Science

CGPA: 3.71/4
